It's a simple tool for extracting code from source files, which is commonly used for the documentation purpose. Usage: `sudo pip install code_extractor`
`code_extractor script.py` This is a simple script for that package: The script has two sub-commands: the [help] command shows the help text, and you can see an example how to use the tool. I hope it helps! The present invention relates to a method for preventing or inhibiting the corrosion of an agricultural product transported in a container in a humid atmosphere. It is well known that the corrosion of agricultural products is usually promoted by a humid atmosphere. For example, when

water-soluble fertilizers, such as ammonium nitrate, are transported in a container in a humid atmosphere, the degree of the corrosion is greater than that of corresponding fertilizers transported in a dry atmosphere. In order to prevent such corrosion, it has heretofore been proposed to use a dehumidifying agent containing a metal hydrate as described in Japanese Patent Application Publication No. 57-35404 and Japanese Patent Laid-Open No. 60-139239. When such a dehumidifying agent is used, however, the production cost increases, and when it is used in an amount sufficient to satisfactorily dehumidify air, a large amount of the agent remains unconsumed in the air and hence there is the problem that

the dehumidifying agent will be scattered in the air and hence dust. Moreover, since such dehumidifying agents require heat energy, there is the further problem that the time required for cooling is longer in comparison with that in which no dehumidifying agent is used.
